

My internship in Ireland

From Monday 14/05/2018 to Friday 01/06/2018 I took part in internship in Ireland. I worked in Ryalls Farm & Industrial Equipment Ltd. company.

It is a company which is interested in repairing and selling of agricultural machines like tractors, disc mowers, various modifications of carriages, spraying system, tedders and much more.

I was staying with the Ryalls family. Host mother is called Geraldine Ryall and host father is called Jimm Ryall. They have 2 daughters and 1 son. Both daughters study and I enjoyed the time with them very much.

The interesting fact is, that Jimm is a brother of the owner of the company, which I worked in.

At first it was hard to deal with my everyday life in Ireland, but as the time went further, my life became a routine. It's true that after arrival I had surprisingly little trouble adapting myself to life in the Czech Republic.

In the company I helped with assembling tedders or analyzing a tractor and finding and figuring out various technical problems. All the time it was a job that I expected.

I consider this job a new experiences with new culture, new country and new environment and very good for enriching my general knowledge. And I accomplished all of that, so that's why I can rate my internship in Ireland only in the positive way.
